

Our project is an app to protect our planet! The Scan-Tastic Scans your items and checks if there is plastic in the product. If there is plastic, it suggests a plastic-free alternative.

When you scan an item the app tells you how long it takes to break down. However, it tells you where you can recycle it nearby.

Maddison + Naula

This project is for people all ages. We have decided to make an app which will be available all around the world! Our goal is to encourage people to refuse, reuse and recycle. We want to inspire people to use less plastic and respect all of the animals in the ocean. This app was made in the U.K therefore it will be released there first including:

- England
- parts of Scotland
- Northern Ireland
- Wales
- and many more

SCAN-TASTIC

We Scan for plastic

We think this app could change the world because it will make you think how much we're harming our planet. We hope it makes people think about the choices they're making and the effect on our planet.

If you forget to bring your phone or it is running low on battery our app is available on Scan \$go; available in ASDA/tesco.

Did you know?

An average person eats 70,000 micro-plastics each year.

Between 4.8 and 12.7 million tonnes of plastic goes into the ocean each year.

Over 1 million animals are killed each year by plastic.
